

Akobir Ziyodullayev

Frontend Developer

Tashkent, Uzbekistan | +998 99 547 62 02 | akobirjsdev@gmail.com | github.com/Ziiyodullayevv | linkedin.com/in/ziiyodullayevv

Frontend Developer who contributed to production products including TMS Pro, Mock4IELTS, and Lunch Drop, and mentored 500+ students. Builds React, Next.js, TypeScript, and React Native applications with role-based dashboards, reliable API integrations, real-time features, and mobile workflows.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React, Next.js, React Native (Expo), Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, MUI

Forms & Data: REST APIs, React Hook Form, Zod, JWT authentication, MUI Data Grid, LiveKit

Engineering: Component architecture, role-based access, responsive UI, API contracts, Git, Docker, Vite, ESLint, Prettier

PROFESSIONAL EXPERIENCE

Frontend Developer @ XXB LLC

December 2024 - October 2025

Product: TMS Pro — Transportation Management System | Live: tmspro.info

- Delivered React and TypeScript features for TMS Pro by turning business requirements into responsive operational screens backed by REST APIs.
- Reduced repeated UI logic across forms, tables, and operational screens by creating reusable patterns for loading, error, empty, and permission-aware states.
- Improved frontend reliability by aligning client-side validation and interface behavior with backend contracts and consolidating shared API and UI logic.

Frontend Mentor | Mars IT, Tashkent

August 2023 - Present

- Mentored 500+ students in JavaScript, TypeScript, React, Next.js, asynchronous programming, and REST API integration through practical assignments and real projects.
- Improved students' code quality and interview readiness through structured code reviews focused on reusable components, state management, API patterns, and debugging.

SELECTED PROJECTS

Mock4IELTS | Frontend Developer | Live: mock4ielts.uz

Next.js, TypeScript, TanStack Query, MUI, React Hook Form, Zod, LiveKit, Docker

- Delivered end-to-end learner workflows across four IELTS modules by building practice, mock-exam, contest, statistics, favorites, notifications, profile, and speaking experiences.
- Reduced duplicated exam logic by standardizing answer-submission and result workflows and centralizing API contracts across authentication, content, media, and user management.
- Enabled real-time speaking sessions by integrating LiveKit through a Next.js token route while isolating public web and admin applications in a Docker-ready monorepo.
- Improved production asset delivery by configuring standalone output, AVIF/WebP formats, responsive image sizes, and long-lived caching.

Lunch Drop | Web & Mobile Frontend Developer | Live: lunchdrop.uz | [GitHub](https://github.com)

React, TypeScript, React Native (Expo), REST APIs

- Supported four distinct user journeys by building employee mobile ordering and role-based admin surfaces connecting companies, branches, kitchens, and employees.
- Improved data consistency by aligning frontend validation with backend rules for billing dates, branch coordinates, image uploads, role access, and status transitions.
- Prevented duplicate courier requests by grouping orders with the same kitchen, destination branch, and target date into a single delivery workflow.
- Enabled end-to-end delivery tracking in a server-side prototype by implementing price checks, claim creation, tracking links, polling, and status mapping.

EDUCATION

Frontend Development @ Webbrain Academy

December 2022 - June 2023

Advanced my practical frontend skills through project-based learning focused on JavaScript, React, modern UI development, and real-world application workflows.

Frontend Development @ Albison Academy

October 2021 - May 2022

Built a strong foundation in HTML, CSS, JavaScript, responsive design, and the core principles of modern web development.
